

VERIFYING YOUR VIDEO DATA

The Essa 'Review Client' is an un-abridged evidence review facility for potential contraventions that have been captured and recorded by the Essa 'Capture Client' or Essa 'TrafficStream' and passed through to the review client for operator verification.

Archive Management

All evidence packs or video evidence files are stored in a searchable/colour coded archive and are presented to the operator in a structured fashion to enable quick processing. Evidence files can be hierarchically assigned by supervisors to other operators and system usage rights assigned on an individual basis.

Review of Images

Standard Digital Video Recording features such as forward/reverse, pause and still image grab are built into the review client. Privacy by way of pixilation is also a standard feature enabling operators to "fuzz out" unrelated people and maintain the integrity of the contravention before passing for issue

Reporting

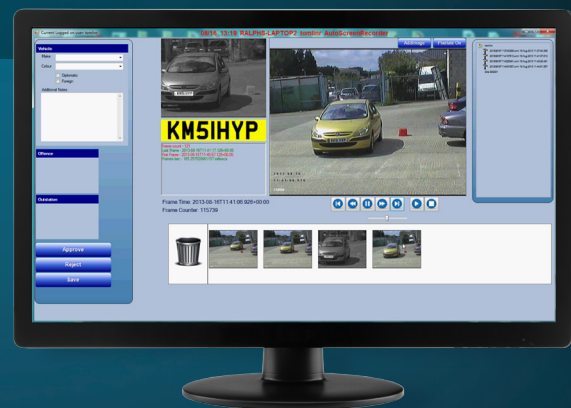

The Essa review client can produce a number of very useful reports such as number of contraventions captured within predefined parameters such as time period, by camera, by operator amongst others.

Key Features

- File management
- Pixilation privacy masking
- Local data storage
- Still image capture
- DVLA data auto-population
- Interface to back office systems
- Full audit trail capability

Benefits

- High throughput
- Greater efficiency
- Meets data protection requirements
- Secure evidence transmission
- Human corroboration of evidence
- Direct evidence to PCN transfer
- Forms part of VCA certified solution
